13.30 - 14.45**

INFO

**Tech Against Trafficking** is a coalition of technology companies - including Amazon, AT&T, BT, Microsoft, Nokia, Salesforce.org, and Vodafone - that believe technology can and must play a major role in preventing and disrupting human trafficking and empowering survivors. Committed to supporting and scaling promising technologies, Tech Against Trafficking launched in 2018 and began mapping the landscape of tech tools currently being used in the anti-trafficking sector.

This side event aims to showcase findings and trends from this landscaping mapping, provide a demo of three of anti-trafficking tools out there, and officially launch the next phase of Tech Against Trafficking's efforts to support the growth and scale of these technologies.
